

**Clean Code Development cheat sheet for 'Personal Task Manager' application building in python:**

1. Set up goal
2. brainstorm the ideas of module can be implimented to reach the goal
3. Arrange the project into appropriate directories
4. Apply every variable and function name with meaningfully
5. Try to pass parameters in the functions instead og global values
6. Always use type annotations to improve code clarity
7. Ensure that each function and class has non corrupting responsibility.
8. Handle errors gracefully and provide meaningful error messages.
9. Define constants for any fixed values to avoid magic numbers/strings.
10. Write docstrings for all functions and classes.
